

## **PSG Basic Duo Probe**

### **Application**

The heated gas sampling probes **PSG Basic Duo Probe** are used for continuous extractive gas analysis. They enable continuously trouble-free representative sampling of hot, predominantly low or medium dust and water vapor loaded gases - high dust load with additional options. Typical applications are emission measurement, process monitoring, control and optimization. The new **PSG Basic Duo Probe** offers 2 independent, sample gas outlets.

### Technology

The intelligent design with optimum gas guidance enables the filtration of sample gas at the outer 212 cm<sup>2</sup> filtration surface (largest worldwide) as well as quick and easy filter change without tools and dismounting of the heated sample line. Easy maintenance of the PSG Basic Duo Probe is enabled due to its newly space-saving bracket design, which also can be used to lift a sticking filter housing lid. The holohedral tight highperformance ring heater in combination with the tight thickwalled glass fiber insulation jacket ensures a homogeneous heating of the complete PSG Basic Duo Probe up to 250 °C. The self-regulated version has a factory setting of 160 °C (standard) up to 180 °C. Regulated temperature enables up to 250 °C and is recommended especially in case of high (acid) dew point or to avoid salification (especially if sample gas includes low acidic / alkaline components as NH<sub>3</sub> leading to ammonium carbonate): Sophisticated PSG Basic Duo Probe design - long lifetime.

### **Functions**

Extreme large filter surface & homogeneous heating ensures that dust will always be separated reliably in the **PSG Basic Duo Probe** without condensation of water vapor thus avoiding blocking of the filter. Due to large filters with 0.1 resp. 0.3 µm porosity the **PSG Basic Duo Probe** can be used for applications with up to 3 g/m<sup>3</sup> dust and 10 g/m<sup>3</sup> with pre-filter or single stage back purge. The 0.3 µm surface coated SiC ceramic filter enables best thermal & chemical resistance also for tough applications. The standard calibration resp. test gas connection enables the use of the **PSG Basic Duo Probe** within emission monitoring systems acc. to EU Regulations 2000/76/EG & 2001/80/EG: TI Air (TA Luft), 13<sup>th</sup> & 17<sup>th</sup> BlmSchV (large combustion plants, waste incineration). **PSG Basic Duo Probe** design allow small, medium or high dust contents.

- Extreme low maintenance due to the largest active filter surface on the market
- 4-fold less maintenance than any other filter: 100 mg/m3 dust =>2 years interval
- Controlled filter heating up to 250 °C or self-regulated heating: 160 °C to 180 °C
- Filter change without tools and sample line dismounting
- Corrosion resistant realized with stainless steel SS 1.4571 / Fitting SS 316
- Calibration & back purge connection
- Temperature alarm contact included
- Compact protective housing for outdoor installation under rough conditions
- Sampling of low and medium dust high dust load with additional measures

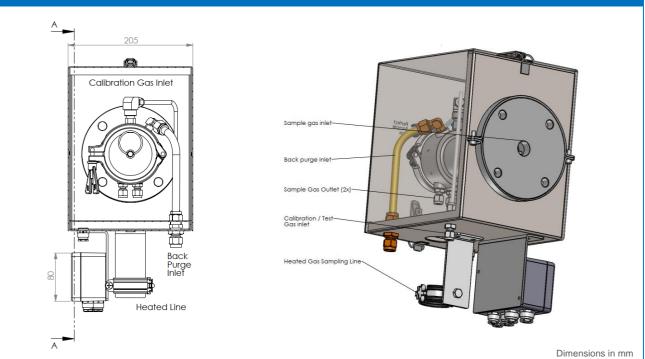

# **Technical Data**

Process gas sampling Conditions			
Pressure	506000 hPa (mbar)		00 4 4574
Sample Gas Temperature	Up to 600 °C Tube:		SS 1.4571 SS 1.4893
Sample Gas Temperature	Up to 900 °C Standard Tube: High resistant Tube:		Hastelloy C4
Sample Gas Temperature	Up to 1300 °C Tube:		Kanthal APM
Ambient temperature	250 W heater: -30 50 °C // 350 W heater: -50 50 °C		
Flow	30500 l/h (combined), referred to 1013 hPa and 0 °C		
Pressure drop	Approx. 0.6 hPa at 100 l/h		
Standard Basic with standard filter unit	Dust concentration:		Maintenance:
Standard Dasic with standard litter unit	< 100 mg/m <sup>3</sup>		Any 2 years Twice a year
	$< 1 \text{ g/m}^3$	< 1 g/m <sup>3</sup>	
High Dust Content			Any 3 months
